Product Description

This utility deletes documents automatically from the iManage Work database. The command line utility places all profile information in a log prior to the purging of documents. Document deletion is fully configurable based on any custom field criteria, i.e. delete all documents which have a Document Class of DELETE.

AutoDelete supports a configurable grace period. This requires documents to remain for a specific number of days before being automatically deleted. This ensures that the files are backed up prior to removal.

The new release of AutoDelete has the ability to:

- Hide documents when marked for all users except Admin
- Hold documents for x days after deletion
- Choose document information to export to log file
- Optional Client-Side add-in
 - Marking of all versions
 - Split commands (*Mark/Unmark* for delete)
 - Append text to marked document descriptions
 - History when a user *marks/unmarks* a document
