Product Description

The Younts' DocUnlock utility will allow Non-Administrative users the ability to "unlock" documents that they do not have full rights to. This is an ideal solution for Helpdesk personnel who currently have no method of Unlocking a document to which they do not have Full Access. With Document Unlock, Non-Administrative users will have the ability to unlock documents by right clicking on the document; or, if they have no access to a document, are able to choose a database, document number, and version.

DocUnlock is a useful utility for Help Desk users (users do NOT need to be members of NRTadmin group). Help Desk users will not see document names or other metadata including security.

Supports iManage FileSite 8.x and DeskSite 8.x.
